Liquid Endo

MycoApply® Liquid Endo is a concentrated liquid of 4 top performing endomycorrhizal fungi in distilled water used as a soil drench or seed inoculant. **MycoApply® Liquid Endo** contains mycorrhizal fungi that colonize plant roots and extend the root system into the surrounding soil greatly enhancing the absorptive surface area of root systems, forming an essential link between plant and soil. The plant enjoys improved nutrient and water uptake, root health and superior field performance. **MycoApply® Liquid Endo** can be stored in a cool dry area .

Directions	Benefits
<p>MycoApply® Liquid Endo can be watered into existing plants, seed beds, or roots at transplant time. The goal is to make physical contact between the inoculum and the roots/seed.</p> <ul style="list-style-type: none"> • One gallon treats 40 acres during seeding, or over existing forage or grain crops in porous soils. • Existing Orchards: <ul style="list-style-type: none"> • Young orchards each gallon will treat 20 acres • Mature orchards each gallon will treat 10 acres • Can be diluted or mixed with other compatible liquids during application <p>*For all other types of applications please call us toll free at: 866-476-7800 for a recommendation</p>	<p>Reduces: Drought stress Water and fertilizer needs Transplant shock</p> <p>Increases: Flowering and fruiting Water and nutrient storage and uptake Root growth</p> <p>Promotes: Extensive root system Soil structure Plant establishment</p>
Ingredients	Specifics
Endomycorrhizal fungi: 99.9% Inert Ingredients	Glomus intraradices, G. aggregatum, G. mosseae and G. etunicatum (238 prop./ml each). Distilled Water

Statement of Claims: MA, Inc. certifies that this product contains the indicated mycorrhizal fungi and propagule rates stated on the label. The mycorrhizal symbiosis is sensitive to environmental conditions and MA, Inc. is unable to make guarantees beyond the above statements.
